

FIRST RESPONSE DECONTAMINATION

NATO APPROVED

NATO PERSONAL DECONTAMINATION KITS

DKP1 & DKP2

DANGERS OF EXPOSURE

Protecting those who Serve & Protect

The Governments “Zero Harm” Policy seeks to ensure “That all employees return home at the end of each shift in the same condition that they started.”

As Military and Emergency Service Personnel, there are risks of Contamination that may result from:

- Deliberate release of biological materials, chemicals & radioactivity.
- Improvised Radiological Devices (Dirty Bombs)
- Deliberate use of nuclear or improvised nuclear devices.
- Other terrorists acts.
- Unintentional releases.
- Materials in transit & incidents at sea.
- Industrial & commercial sites, laboratories & hospitals.
- Exposure to infectious diseases such as MRSA, Tuberculosis, HIV and more.
- Exposure to saliva, vomit, faeces, urine & blood.

The importance of early decontamination cannot be over emphasized. Decontamination of the skin and clothing should be accomplished quickly if it is to be fully effective. Maximum benefit of this will be achieved within fifteen minutes of exposure, i.e. in the period before any CBRN specialists are likely to have arrived on scene.

Research also shows that dry decontamination, the blotting and rubbing of exposed skin surfaces with dry absorbent material, is the most effective means and for non-caustic agents on this basis they recommend that dry decontamination should be considered the default process for an incident involving most chemicals.

Whether a Soldier on the frontline, a Police Officer transporting a suspect, a Fire & Rescue Officer attending a road traffic accident, an Ambulance Officer treating a patient, we have the ability with Rapid Response CBRN kits to “Protect those, who Serve and Protect.”

“The most important and most effective decontamination of any chemical exposure is that decontamination is done within the first minute or two after exposure. This is self-decontamination and this early action will make the difference between survival and death or severe injury.”

THE FORCE OF PROTECTION

NATO Decontamination Kits will save lives

Nato approved Decontamination kits DKP1 & DKP2 are an essential part of military equipment that have been tried, trusted and used for over 75 years.

The Decontamination Kits can be used for any CBRN incident. They provide personal protection from chemical & bodily fluid contaminants.

The Kit contains Fullers Earth, naturally occurring sedimentary clay composed mainly of alumina, silica, iron oxides, lime, magnesia and water, in variable proportions.

The decontamination process involved, is the physical removal of the agent from surfaces, skin, clothing, footwear etc.

- Highly efficient chemical absorbency
- Made from 100% Natural Fullers Earth
- Essential component of any CBRN kit
- Safety
- Ease of application by hand
- Readily available
- Rapid action
- Stability in long term storage
- Short term stability (after issue to unit/individual)
- Affordability
- NATO, MoD and Home Office approved
- Made in Great Britain

Decon Kits are used by:

- British Ministry of Defence
- NHS ambulance services in the UK
- British Police Force including the Police National CBRN Centre
- UK Civil Defence Units
- Northern Ireland Ambulance & Police
- Canadian Police
- New Zealand Defence Force
- DSTA/SAF (Singapore Armed Forces)

There are 2 Decontamination Kits available

DKP1 - Each person No1 kit contains:

Four BLOT-BANG-RUB double sewn sachets containing 20g of highly absorbent natural Calcium Montmorillonite (Fullers Earth).

DKP2 - Each No2 kit contains:

94g of Calcium Montmorillonite (Fullers Earth) in an easy to use puffer pack.

Kits contain clear easy to understand instructions.

UK Ministry of Defence
and Home Office Approved

ADDITIONAL PRODUCTS IN THE PELGAR **MILITARY** RANGE

Deet 34% Personal Insect Repellent 60 ml

- Triple protection from all biting insects.
- Rapid knockdown and kill of mosquitoes, midges, sandflies, horseflies, clegs, ticks, wasps, hornets, moths, houseflies, cluster flies, fleas, bedbugs and ants.
- Ideal for use during deployment or training
- Versatile compact pack; fitting into battle dress/combat fatigues; turn out uniforms pouches or pockets.
- Effective protection for up to 8 hours

NSN: 6840-01-284-3982

Permapel Military Uniform Insect Repellent

- Repels mosquitoes, midges, ticks and other biting insects
- Suitable for all types of military/service uniforms.
- Use on tents, mosquito nets, rucksacks and camping fabrics
- Use on any civilian clothing.
- 3 minute application process.
- Up to 3 month protection against biting insects (dependent on weather and usage)
- Non-staining and odourless.

NSN: 6840-99-300-0661
